Kaory Gatmaitan

keskaory@berkeley.edu | Berkeley, CA | linkedin.com/in/kaorygatmaitan

EDUCATION

University of California, Berkeley Berkeley, CA
B.A. in Data Science; Minor in Statistics *Expected December 2027*
Relevant Coursework: Data Engineering, Principles & Techniques of Data Science, Data Structures & Algorithms

EXPERIENCE

Cornerstone Consulting (UC Berkeley student consulting group) Berkeley, CA
Project Manager, ***Sage Bionetworks*** *September 2026 – Present*

- Pitched and won Sage, a biomedical research nonprofit, as a client; co-lead 6 consultants on the 12-week project to price new AI features in its data platform and run the client calls.
- Set the cost team's core question and presented the answer to Sage: a paper costs ~10x more to process in AI chat than in batch ($4.77 vs. $0.47), so how researchers use AI drives cost.
- Reworked the researcher survey to ask how often and on how much data researchers use AI, not whether they'd like it, so answers feed the cost model; Sage approved all 18 questions.
- When Sage ruled out direct data access, got it to export its AI token, spend, and chat-session logs, so the team could check its cost model against Sage's actual bill.
- Had the team retest its draft pricing tiers at Sage's real usage (1–4 chat users a day) to decide whether a $20 tier would earn revenue or mainly cap heavy users' AI costs.

Strategy Consultant, ***Slack*** *February 2026 – May 2026*

- Built Slack's U.S. higher-ed market sizing: **$1.7B** TAM, $1.06B SAM (12.2M four-year students), and $84.8M SOM at 8% adoption, with a $53M–$117M range at 5–11%.
- Co-wrote the interview guide and ran student interviews (12 across 3 interviewers): students follow their friends to an app, and won't pay $87/yr while free tools exist.
- Presented 2 of the team's 4 go-to-market recommendations built on that finding: sell to universities, not students, and fold the cost into tuition so a whole campus joins at once.

Strategy Consultant, ***IBM & AWS*** *March 2026 – May 2026*

- Benchmarked 5 rival developer communities, then designed the member tiers, 6 discussion spaces, and moderation rules for a proposed IBM webMethods developer hub on AWS Marketplace.
- Designed how the hub connects AWS Marketplace, IBM SkillsBuild, and the community, so one login, earned badges, and deploy status follow a developer through a 6-step journey.
- Wireframed the hub's community entry page from user research and co-built its learning-path screens.

UC San Diego ARMOR Lab La Jolla, CA
Student Research Assistant *June 2024 – August 2024*

- Turned raw readings from 4 wearable strain sensors into a MATLAB dataset of 30 deadlift sets (5 lifters × 6 conditions) to test whether low-cost motion tape can flag uneven form.
- Replaced an asymmetry score that couldn't tell lifters which side to fix with a signed –5 to +5 index; presented to UCSD faculty: experienced lifters showed smaller left/right gaps.

PROJECTS

Nexus, Company Relationship Map for iPick.ai (team project) *March 2026 – April 2026*

- Built the subsidiary pipeline for the team's investor-facing company map: finds Exhibit 21 in SEC 10-K filings, extracts names with Llama 3.2 and a regex fallback, and validates the JSON.

ADDITIONAL EXPERIENCE

UNIQLO Emeryville, CA
Sales Associate *September 2024 – February 2025*

- Owned a floor section and opened and closed the store; worked register, returns, and fitting rooms.

SKILLS

Product & Research: Market sizing, pricing and unit-cost analysis, survey design, user interviews, wireframing
Technical: SQL (PostgreSQL), Python (pandas, NumPy, scikit-learn), Excel, MATLAB, Git
